

SealR Tape Mass Loaded Vinyl Joint Sealing Tape

MetroFlex SealR™ Tape is used to seal the joints and seams of mass loaded vinyl in various soundproofing applications to ensure a complete and air-tight sound barrier system. MetroFlex SealR™ MLV Tape should be applied on all seams between two sections of mass loaded vinyl after MetroFlex Sound SealR™ Acoustic Sound Sealant is applied to the joint.

MetroFlex SealR™ Tape is a composite of copolymer film laminated to an interwoven alloy which provides an extremely high tensile strength while maintaining the flexibility of the mass loaded vinyl. The adhesive is a self-curing acrylic which provides a high initial tack when applied to vinyl based products. The adhesive strength increases with time creating an exceptional permanent bond with the vinyl.

Physical Properties

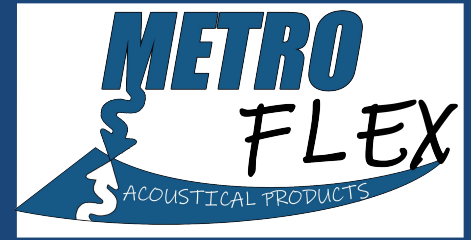

Adhesive Type	Acrylic
Cure Type	Self-Curing
Color	Black
Shelf Life	24 Months
Application Temp	0°F to 150°F
Tensile Strength	54 lbs/in
Elongation	33%

Roll Dimensions

Width: 4"

Length: 165'
